Social housing solution
to help give feedback

TELLMYCITY® participate in the future of his city

01

Reinforce the link between public services and the citizen

The citizen makes a report in a few clicks thanks to a dedicated application and the city keeps him informed of the processing's status of his report just as easily.

TELLMYCITY® participate in the future of his city

What was the preliminary will of the city?

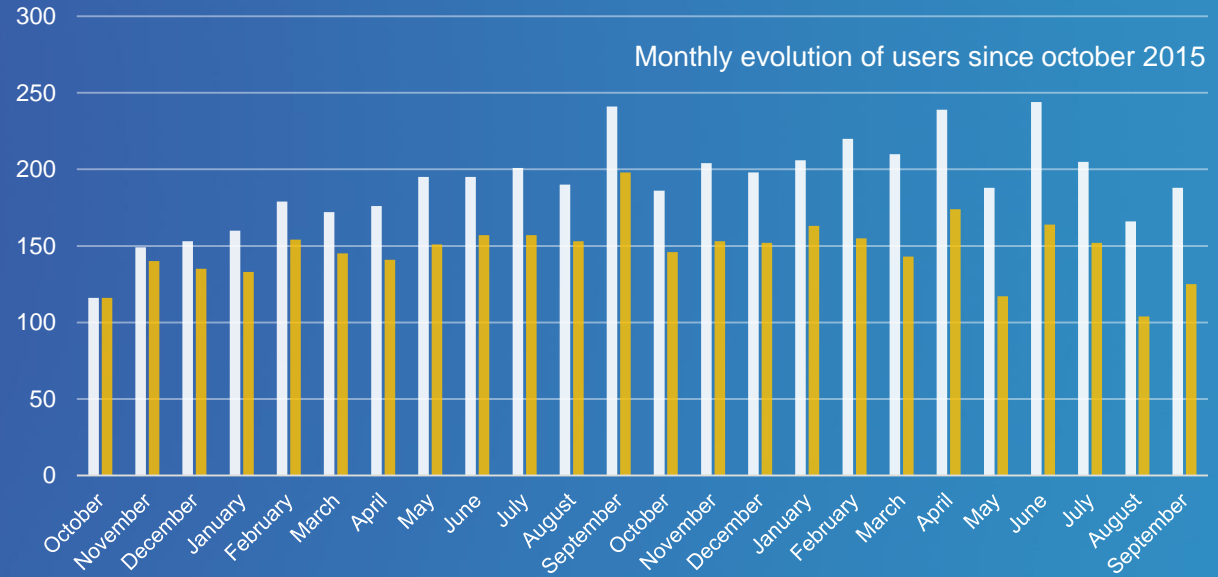

Each city wants to improve its relations with citizens by allowing them to become an actor in their city. Cities often have an objective to be achieved linked to a specific problem; waste, degradation, new service.

02

Centralize public services with a digital tool

Every information created by TELLMYCITY® is automatically directed to the service or the person concerned. The treatment process is clarified and the city has an overview.

TELLMYCITY® participate in the future of his city

What does it change in terms of public management?

The organization of the city around a digital tool makes it possible to organize more efficiently its services and the public relation with the citizen. Public services also gain time in processing without increasing their workload.

03

Exploiting the full potential data from a territory

Our analytical software complement our data collection tools to enable cities to exploit their available data on their territory.

TELLMYCITY® participate in the future of his city

How do the cities use the data to improve quality of life and reduce costs?

Thanks to the information collected and the requests better organized, the cities improve the time and the costs of processing. All these data allow the city to optimize its development decisions.
